

SWINE FLU

LATEST NEWS

Swine Influenza

We have products that can help:

Swine influenza is a highly contagious acute respiratory disease of pigs which is caused by one of several swine influenza A viruses. Human cases of swine influenza has now spread beyond the borders of Mexico and the United States of America, and have been identified as a novel influenza virus. A novel virus is one that humans have not been previously exposed to, meaning that natural immunity will not have been established. Following reports of Swine Flu the Health Protection Agency offers the following advice:

- Covering your nose and mouth when coughing or sneezing, using a tissue when possible
- Disposing of dirty tissues promptly and carefully
- Maintaining good basic hygiene, for example washing hands frequently with soap and water to reduce the spread of the virus from your hands to face or to other people
- Cleaning hard surfaces (e.g. door handles) frequently using a normal cleaning product.

There are currently no official guidance which suggests the use of respirators for the general public in the event of pandemic influenza, however the Health & Safety Executive currently recommends the use of highest efficiency filters (P3) for protection against viruses, advise which is echoed by the Health Protection Agency (HPA).

DEB INSTANTFOAM HAND SANITISER
Instant sanitising action kills 99.999% of many germs and bacteria that cause common illness in just 15 seconds.
Size: 47ml

DEB INSTANTFOAM HAND SANITISER
Fits both Touchfree and Proline dispensers.
